

# About **W2E**

W2E is a solutions-oriented organization created by entrepreneurs in the US and Asia. The founders are skilled in renewable energy technology development, from small-scale research through full commercial deployment, including facility operation and facility business management. The Company has developed technology to provide waste-to-energy services and products to service specific industry categories. W2E will particularly service the market niche to provide turnkey waste-to-energy systems that are from 200kW to 30 MW in size. This includes small scale systems for villages in remote locations as well as larger municipal solid waste transfer facilities providing electricity back to the local grid.

Corporate capabilities include developing and delivering solutions for waste-to-energy, biomass waste conversion, energy recovery from low quality coal, chemical and liquid fuel production from wastes, and safe disposal of bio-medical waste. Company principals have extensive experience in energy engineering, gasification technologies, chemical process development, mechanical design, thermal analysis, plant instrumentation, site engineering and safety equipment for processing systems.

The company has its US offices in Princeton, New Jersey, and Palatine, Illinois, and its primary India office is in Cochin, Kerala. The Company is able to perform competitively in the global marketplace of renewable energy products and services.

## OUR VISION

To solve global waste and energy issues by implementing small-sized, local solutions that are practical and can be easily replicated worldwide.

## OUR MISSION

To provide sustainable strategies for clients, including but not limited to, appropriate turnkey energy and waste solution systems that are readily integrated, perform to expectations consistently, and create continuing economic benefits for the owner.

Distributed energy generated locally, using domestic waste resources, provides energy security and waste disposal solutions. By designing renewable energy strategies for local waste generators or collection locations, W2E provides a simple path to create energy and avoid typical disposal practices.

Integration of the compact and practical waste utilization technologies in a W2E design is a straightforward transition, and provides significant economic and environmental benefits to its owner-operator and the surrounding community.
